

## Extendable Laparoscopic & Standard Quivers

Securely hold and protect your instruments

ITL's Quiver options reduces the risk of injury to staff and patients from traumatic heated instruments.

The patented Extendable Laparoscopic Quiver is designed to hold and protect diathermy/electrosurgical, laparoscopic and bariatric instruments during the procedure.

The innovative smooth and seamless inner bore avoids instrument damage and is designed to protect the instrument tip when inserted and removed.

## ITL's unique Extendable Laparoscopic Quiver

- The innovative smooth atraumatic inner bore ensures that valuable laparoscopic instruments are securely held and protected when entering and leaving the quiver
- The Extendable Laparoscopic Quiver has a wide 7cm diameter opening to accommodate multiple laparoscopic and bariatric instruments with a full extended length of 40cm avoiding damage to instrument tip
- The Extendable Laparoscopic Quiver can be used in either standard or extended length providing one solution for different procedures
- Packaged at 22cm standard length, the Extendable Laparoscopic Quiver reduces storage space of up to 50%
- Clinically disposable and made from lightweight, durable medical grade polypropylene suitable for recycling

## Extendable Laparoscopic Quiver

### Protects

- Wide 7cm diameter accommodates multiple laparoscopic instruments
- The smooth inner bore avoids instrument damage

### Ergonomic & Stable

- Grip surface is available for push/pull and lock to desired length position
- PVC Loop or Cable Tie enables attachment to almost any surface

### Maximise Efficiencies

- Packaged at 22cm standard length to reduce storage space of laparoscopic quivers by 50%
- All of ITL's Quivers can be easily added to customised procedure packs to reduce overall packaging

## ITL's Standard Quiver

### Complete all your instrument containment needs

- 5.5cm diameter opening and 22cm standard length accommodates multiple instruments and devices
